

Engineered flooring range

- We currently stock three exciting brands of engineered flooring, all of these carefully chosen by our design team at Heritage Timbers.
- **Smartfloor** is 14.5mm prefinished engineered flooring with a 3.5-4mm wear layer. It is supplied prefinished for quick and easy installation and can be direct stuck or floated. In most cases it can be re-sanded 2-3 times.
 - **Ultra Smartfloor** is a 21mm engineered flooring with a big 6mm wear layer (equivalent to solid timber). It is available in a variety of prefinished and unfinished species. Ultra Smartfloor is designed to appear as solid timber flooring whilst giving you the benefits of an engineered timber floor! With the extra thickness and the wear layer being real wood, it gives a more natural sound and feel for walking on and most importantly, it can be sanded over and over again, meaning it will last you a lifetime!
